

# DuPont™ Kalrez®

## Chemical Resistance and Fluid Compatibility, Including All Chemicals Under the Clean Air Act

Technical Information—Rev. 4, July 2010

DuPont™ Kalrez® perfluoroelastomer parts combine the elastomeric properties of fluoroelastomers with the chemical resistance of DuPont™ Teflon® fluoropolymer resins. Due to its unique properties, Kalrez® parts should be considered for service in all applications and environments where dependable, long-term service is desired, as well as in hot or aggressive environments that are beyond the service ability of common elastomers.

This guide is intended to provide assistance in determining the suitability of seven commercially available elastomers—nitrile (NBR), ethylene propylene (EPDM), silicone (VMQ), fluorosilicone (FVMQ), vinylidene fluoride-based fluoroelastomer (FKM), polysulfides (T), and Kalrez® perfluoroelastomer parts—for service in over 1,600 chemicals and fluids. The criteria used for these ratings included volume swell resistance based on laboratory immersion testing, laboratory aging tests, actual field experience, and informed judgments based on experience in similar chemical groups.

The ratings for the six common elastomers are based on published literature and are offered for general comparative purposes only—we cannot guarantee their accuracy nor assume responsibility for their use.

### Thermal Stability

The ratings for these six common elastomers may be overly optimistic for elevated temperature and/or high concentration applications because many are based on ambient temperature testing. Suitability of these elastomers for service at elevated temperatures rapidly diminishes because higher temperatures increase the effects of chemicals on the base polymer as well as the cross-link systems. Serviceability is further limited by the upper service temperature limit of each polymer.

As an example, consider a specific case involving an FKM with an upper service temperature limit of nominally 204 °C (400 °F). Many sources will show an “A” rating for FKM suitability in toluene service, a common chemical. However, immersion testing of commonly available FKM O-rings at a slightly elevated temperature of 50 °C (122 °F) for 168 hours shows a volume swell exceeding 24% and significant loss of physical properties—surely warranting a “C” rating. Similar tests with Kalrez® perfluoroelastomer parts, however, show that Kalrez® performs well up to 316 °C (600 °F).

*The miracles of science™*

## Upper Service Temperature Limit

DuPont™ Kalrez® 7075	327 °C (620 °F)
DuPont™ Kalrez® 4079	316 °C (600 °F)
DuPont™ Kalrez® 3018	288 °C (550 °F)
DuPont™ Kalrez® 1050LF	288 °C (550 °F)
DuPont™ Kalrez® 6375	275 °C (527 °F)
DuPont™ Kalrez® 2037	220 °C (428 °F)
NBR	107 °C (225 °F)
EPDM	149 °C (300 °F)
VMQ	204 °C (400 °F)
FVMQ	190 °C (375 °F)
FKM	204 °C (400 °F)
T	150 °C (302 °F)

**Note:** These limits are based on air oxidative stability; limits when exposed to specific chemicals are often much lower. Additionally, these elastomers are commercially available in different grades of polymer and can vary in compound ingredients—different grades and compounds within a polymer class can have significantly different performance characteristics. 100 °C (212 °F) was chosen as the baseline comparison for the elastomers in this guide.

## Chemical Resistance

Because DuPont™ Kalrez® has outstanding chemical resistance, it withstands nearly all classes of chemicals. With this combination of high thermal stability and excellent chemical resistance, the Kalrez® perfluoroelastomer parts rating may be conservative, as actual field experience and the example above have demonstrated.

In comparing the chemical and fluid resistance of Kalrez® perfluoroelastomers to that of DuPont™ Teflon® fluoropolymer resins, certain differences should be kept in mind:

- Kalrez® parts are an amorphous low-modulus rubber whereas Teflon® is a crystalline high-modulus plastic. In fluid environments where high permeation occurs, Kalrez® will probably swell to a greater extent than Teflon®, even though the polymer is not chemically attacked. Environments in which this is most noticeable are fully halogenated solvents, Freon®, and Freon® alternatives. Service ability of Kalrez® parts in these environments will be dependent upon the specifics of the application.
- As with all elastomers, it is necessary to compound Kalrez® perfluoroelastomers parts with fillers and curatives to gain desired mechanical properties for functionality. In a limited number of environments, even though the polymer is stable, the fillers and curative systems may interact with the chemicals. However, because the level of fillers in Kalrez® parts is much lower than in most other elastomers, such filler interactions are generally negligible with Kalrez® parts. Where such interactions can occur, such as in highly oxidative environments, service performance is dependent on the conditions of the application and may be affected by compound choice.

Because each application is unique, it is recommended that users of Kalrez® perfluoroelastomer parts always conduct their own evaluations to determine the suitability of Kalrez® for their application. Because of laboratory constraints and differences in field applications, the results shown in this technical information may be based on conditions that may not necessarily reflect actual operating environments for a specific application. Additionally, many elastomeric materials may show excellent chemical resistance to pure reagents in relatively short-term laboratory tests. However, they may fail in actual service because of chemical attack by additives and/or impurities. Kalrez® perfluoroelastomer parts, with their near-universal chemical resistance, provide an extra degree of safety against these unknown corrosive influences.

Case histories are available from your authorized Kalrez® distributor detailing proven performance of Kalrez® parts in over 100 specific chemical applications. Information on test performance in a limited number of specific chemicals is also available through your authorized Kalrez® distributor.

## **Caution**

DuPont™ Kalrez® perfluoroelastomer parts, like all fluorinated products, should not be exposed to molten or gaseous alkali metals, such as sodium and potassium, because a highly exothermic reaction may occur.

At elevated temperatures above 100 °C (212 °F), service life may be significantly reduced in fluids containing high concentrations of some diamines, nitric acid, and basic phenols. Kalrez® parts should always be tested for suitability.

## **Rating System**

- A Elastomer shows little or no effect (generally less than 10% swell) after exposure to the chemical; slight swelling or loss of properties may occur under severe conditions but this should not affect performance.
- B Elastomer may be affected by the chemical after exposure, as evidenced by slight visible swelling (10%–30%) and/or loss of physical properties; Kalrez® parts will often perform satisfactorily long after other elastomers have failed.
- C Elastomer is affected by the chemical after exposure, as evidenced by moderate to severe swelling and/or loss of physical properties; limited functionality is possible but must be determined by testing.
- U Elastomer is not suitable for service in the chemical.

Where no rating is shown, insufficient information was available to make a judgment.

**An asterisk (\*) next to a Kalrez® perfluoroelastomer rating indicates that differences may exist between Kalrez® products in certain applications that could affect relative performance. The compound numbers indicated are recommended for that application. If no compound number appears beside the asterisk (\*), contact your authorized distributor or DuPont for the best compound. For such environments, other elastomers generally have very limited service ability.**

This chemical compatibility listing is based on using our standard compounds DuPont™ Kalrez® 7075 and 6375 for the vast majority of chemicals and fluids. Mixtures with two or more different chemical types/classes should be reviewed with the Kalrez® technical group or your authorized Kalrez® distributor before proceeding. Testing is always recommended for each proposed use of Kalrez® because actual application conditions may vary. For more complete information regarding compound selection, at specific temperatures, consult the Kalrez® Application Guide.

## DuPont™ Kalrez® KVSP™ Chemical Compatibility Resists Chemical Attack From All Chemicals Listed Under the Clean Air Act.

The Kalrez® valve stem packing systems (KVSP) are virtually unaffected by over 1800 chemicals and solvents . . . from acetone to sulfuric acid, from heat transfer fluids to steam service. The Kalrez® valve stem packing systems are based on using component materials with chemical resistance similar to DuPont™ Teflon® and as such resist chemical attack and can handle temperatures to 288 °C (550 °F).

Kalrez® is an elastomeric derivative of Teflon®, using the same base monomer as Teflon® TFE as part of its chemical structure. Kalrez® provides a unique balance of nearly universal chemical resistance and high temperature stability combined with the memory and sealing characteristics of a rubber.

The Environmental Protection Agency (EPA) regulations include the volatile hazardous air pollutants (VHAPs) under Appendix A and extend through the five production process category groups listed under Appendix B.

### Appendix A. Volatile Hazardous Air Pollutants

Chemical Name	CAS Number	Chemical Name	CAS Number
Acetaldehyde	75070	Cresols/Cresylic acid (isomers and mixture)	106445
Acetamide	60355	Cumene	98828
Acetonitrile	75058	2,4-D, salts and esters	94757
Acetophenone	98862	DDE	3547044
2-Acetylaminofluorine	53963	Diazomethane	334883
Acrolein	107028	Dibenzofurans	132649
Acrylamide	79061	1,2-Dibromo-3-chloropropane	96128
Acrylic acid	79107	Diethylphthalate	84742
Acrylonitrile	107131	1,4-Dichlorobenzene(p)	106467
Allyl chloride	107051	3,3-Dichlorobenzidene	91941
4-Aminobiphenyl	92671	Dichloroethyl ether	
Aniline	62533	(bis[2-chloroethyl]ether)	111444
o-Anisidine	90040	1,3-Dichloropropene	542756
Benzene	71432	Diethanolamine	111422
Benzidine	92875	N,N-Diethyl aniline	
Benzotrichloride	98077	(N,N-Dimethylaniline)	121697
Benzyl chloride	100447	Diethyl sulfate	64675
Biphenyl	92524	3,3'-Dimethoxybenzidine	119904
Bis		Dimethyl aminoazobenzene	60117
(2-ethylhexyl)phthalate (DEHP)	117817	3,3'-Dimethyl benzidine	119937
Bis (chlormethyl)ether	542881	Dimethyl carbamoyl chloride	79447
Bromoform	75252	Dimethyl formamide	68122
1,3-Butadiene	106990	Dimethyl hydrazine	57147
Caprolactam	105602	Dimethyl phthalate	131113
Carbon disulfide	75150	Dimethyl sulfate	77781
Carbon tetrachloride	56235	4,6-Dinitro-o-cresol, and salts	534521
Carbonyl sulfide	463581	2,4-Dinitrophenol	51285
Catechol	120809	2,4-Dinitrotoluene	121142
Chloroacetic acid	79118	1,4-Dioxane	
2-Chloroacetophenone	532274	(1,4-Diethyleneoxide)	123911
Chlorobenzene	108907	1,2-Diphenylhydrazine	122667
Chloroform	67663	Epichlorohydrin	
Chloromethyl methyl ether	107302	(1-Chloro-2,3-epoxypropane)	106898
Chloroprene	126998	1,2-Epoxybutane	106887
Cresols/Cresylic acid (isomers and mixture)	319773	Ethyl acrylate	140885
Cresols/Cresylic acid (isomers and mixture)	95487	Ethyl benzene	100414
Cresols/Cresylic acid (isomers and mixture)	108394	Ethyl carbamate (Urethane)	51796
		Ethyl chloride (Chloroethane)	75003

## Appendix A. Volatile Hazardous Air Pollutants (continued)

Chemical Name	CAS Number	Chemical Name	CAS Number
Ethylene dibromide (Dibromoethane)	106934	N-Nitroso-N-methylurea	684935
Ethylene dichloride (1,2-Dichloroethane)	107062	N-Nitrosodimethylamine	62759
Ethylene glycol	107211	N-Nitrosomorpholine	59892
Ethylene oxide	75218	Phenol	108952
Ethylene thiourea	96457	p-Phenylenediamine	106503
Ethyldene dichloride (1,1-dichloroethane)	75343	Phosgene	75445
Formaldehyde	50000	Phthalic anhydride	85449
Glycol ethers	0	Polychlorinated biphenyls (Aroclors)	1336363
Hexachlorobenzene	118741	1,3-Propane sultone	1120714
Hexachlorobutadiene	87683	beta-Propiolactone	57578
Hexachloroethane	67721	Propionaldehyde	123386
Hexamethylene-1,6-diisocyanate	822060	Propoxur (Baygon)	114261
Hexamethylphosphoramide	680319	Propylene dichloride (1,2-dichloropropane)	78875
Hexane	110543	Propylene oxide	75569
Hydrazine	302012	1,2-Propylenimine (2-Methyl aziridine)	75558
Hydroquinone	123319	Quinone	106514
Isophorone	78591	Styrene	100425
Maleic anhydride	108316	Styrene oxide	96093
Methanol	67561	2,3,7,8-Tetrachlorodibenzo-p-dioxin	1746016
Methyl bromide (Bromomethane)	74839	1,1,2,2-Tetrachloroethane	79345
Methyl chloride (Chloromethane)	74873	Tetrachloroethylene (Perchloroethylene)	127184
Methyl chloroform (1,1,1-Trichloroethane)	71556	Toluene	108883
Methyl ethyl ketone (2-Butanone)	78933	2,4-Toluene diamine	95807
Methyl hydrazine	60344	2,4-Toluene diisocyanate	584849
Methyl iodide (Iodomethane)	74884	o-Tolidine	95534
Methyl isobutyl ketone (Hexone)	108101	1,2,4-Trichlorobenzene	120821
Methyl isocyanate	624839	1,1,2-Trichloroethane	79005
Methyl methacrylate	80626	Trichloroethylene	79016
Methyl tert butyl ether	1634044	2,4,5-Trichlorophenol	95954
4,4-Methylene bis (2-chloroaniline)	101144	2,4,6-Trichlorophenol	88062
Methylene chloride (Dichloromethane)	75092	Triethylamine	121448
Methylene diphenyl diisocyanate (MDI)	101688	Trifluralin	1582098
4,4- $\square$ -Methylenedianiline	101779	2,2,4-Trimethylpentane	540841
Naphthalene	91203	Vinyl acetate	108054
Nitrobenzene	98953	Vinyl bromide	593602
4-Nitrobiphenyl	92933	Vinyl chloride	75014
4-Nitrophenol	100027	Vinylidene chloride (1,1-Dichloroethylene)	75354
2-Nitropropane	79469	Xylenes (isomers and mixture)	1330207
		Xylenes (isomers and mixture)	95476
		Xylenes (isomers and mixture)	108383
		Xylenes (isomers and mixture)	106423

## Appendix B. Hazardous Organic Chemical Production Processes

Chemical Name	CAS Number	Chemical Name	CAS Number
<b>Group I</b>			
1-Chloro-3-nitrobenzene	121733	Diethylene glycol monomethyl ether (Glycol ether)	111773
Acetone	67641	Dimethyl sulfate	77781
Acetonitrile	75058	Dimethylaminoethanol (2-isomer)	108010
Acetophenone	98862	Dinitrobenzenes	25154545
Acrylamide	79061	Dioxide (1,4-Diethyleneoxide)	123911
Acrylonitrile	107131	Dioxilane	646060
Adiponitrile	111693	Diphenyl methane	101815
Allyl alcohol	107186	Diphenyl oxide (POM)	101848
Aminophenol (p-isomer)	123308	Dipropylene glycol	25265718
Aniline	62533	Dodecylbenzene (n-isomer)	121013
Azobenzene	103333	Epichlorohydrin (1-Chloro-2,3-epoxypropane)	106898
Benzene	71432	Ethanolamines (all isomers)	141435
Benzenedisulfonic acid	98486	Ethyl benzene	100414
Benzenesulfonic acid	98113	Ethylene carbonate	96491
Benzidine	92875	Ethylene dibromide (Dibromoethane) (EDB)	106934
Benzophenone (POM)	119619	Ethylene glycol	107211
Biphenyl	92524	Ethylene glycol diacetate	111557
Bis (Chloromethyl)Ether	542881	Ethylene glycol diethyl ether	6299141
Bromobenzene	10861	Ethylene glycol dimethyl ether (Glycol ether)	110714
Butanediol (1,4-isomer)	110634	Ethylene glycol monobutyl ether acetate	112072
Butyrolactone	96480	Ethylene glycol monobutyl ether (Glycol ether)	111762
Carbon tetrachloride	56235	Ethylene glycol monoethyl ether acetate (Glycol ether)	2511159
Chloroacetophone (2-isomer)	532274	Ethylene glycol monoethyl ether (Glycol ether)	110805
Chloroaniline (o-isomer)	95512	Ethylene glycol monomethyl ether acetate (Glycol ether)	110496
Chlorobenzene	108907	Ethylene glycol monomethyl ether (Glycol ether)	109864
Chlorodifluoromethane	25497294	Ethylene glycol monophenyl ether (Glycol ether)	122996
Chloroform	67663	Ethylene glycol monopropyl ether (Glycol ether)	2807309
Chloronitrobenzene (o-isomer)	88733	Ethylene oxide	75218
Chloronitrobenzene (p-isomer)	100005	Formaldehyde	50000
Cumene hydroperoxide	80159	Fumaric acid	110178
Cumene (Isopropyl benzene)	98828	Hexamethylenetetramine	100970
Cyclohexane	110827	Hydroquinone	123319
Cyclohexanol	108930	Isopropylamine	75310
Cyclohexanone	108941	Linear alkylbenzene	123013
Cyclohexene	110838	Maleic acid	110167
Dichloroaniline (all isomers)	95761	Maleic anhydride	108316
Dichlorobenzene (1,4-isomer) (PDB)	106467	Maleic hydrazide	123331
Dichlorobenzene (m-isomer)	541731	Malic acid	6915157
Dichlorobenzene (o-isomer)	95501	Metanilic acid	121471
Dichlorobenzidine (3,3-isomer)	1331471	Methionine	63683
Dichloroethane (1,2-isomer) (EDC)	107062	Methylene chloride (Dichloromethane)	75092
Dichloroethyl ether (bis[2-chloroethyl]ether)	111444	Methylene dianiline (4,4-isomer) (MDA)	101779
Dichlorodifluoromethane	75718	Methylstyrene (a-isomer)	98839
Diethanolamine	111422	Morpholine	110918
Diethylene glycol	111466	Nitroaniline (o-isomer)	88744
Diethylene glycol dibutyl ether	112732	Nitroaniline (p-isomer)	100016
Diethylene glycol diethyl ether (Glycol ether)	112367	Nitrobenzene	98953
Diethylene glycol dimethyl ether (Glycol ether)	111966	Octene-1	111660
Diethylene glycol monobutyl ether acetate	124174	Paraformaldehyde	9002817
Diethylene glycol monobutyl ether acetate (Glycol ether)	124177		
Diethylene glycol monobutyl ether (Glycol ether)	112345		
Diethylene glycol monoethyl ether acetate (Glycol ether)	112152		
Diethylene glycol monoethyl ether (Glycol ether)	111900		

## Appendix B. Hazardous Organic Chemical Production Processes (continued)

Chemical Name	CAS Number	Chemical Name	CAS Number
Pentaerythritol	115775	Chlorotrifluoromethane	75729
Perchloroethylene (Tetrachloroethylene)	127184	Crontoaldehyde	4170300
Phenylenediamine (o-isomer)	95545	Crotonic acid	3724650
Phenylenediamine (p-isomer)	106503	Cyanoacetic acid (CN compound)	372098
Piperazine	110850	Cyclooctadiene	111784
Propiolactone (b-isomer)	57578	Cyclooctadiene (1,5-isomer)	1552121
Propionic acid	79094	Dichloro-1-butene (3,4-isomer)	760236
Propylene glycol	57556	Dichloroethylene (1,4-isomer)	540590
Propylene glycol monomethyl ether	107982	Dichloropropene (1,3-isomer)	542756
Propylene oxide	75569	Diethyl sulfate	64675
Resorcinol	108463	Dimethyl benzidine (3,3-isomer)	119937
Styrene (Vinyl benzene)	100425	Dimethyl formamide (NN-isomer) (DMF)	68122
Succinic acid	110156	Dimethyl hydrazine (1,1-isomer)	57147
Succinonitrile	110612	Dimethyl terephthalate	120616
Tartaric acid	526830	Ethyl acetate	141786
Tetrachlorobenzene (1,2,3,5-isomer)	634902	Ethyl acetoacetate	141979
Tetrachlorobenzene (1,2,4,5-isomer)	95943	Ethyl acrylate	140885
Tetraethylene glycol	112607	Ethyl chloroacetate	105395
Tetrahydrofuran	109999	Ethyl sodium oxalacetate	41892711
Toluene	108883	Ethylene imine (Aziridine)	151564
Trichlorobenzene (a,2,4-isomer)	102821	Ethylenediamine	107153
Trichloroethylene	79016	Ethylhexanol (2-isomer)	104767
Trichlorofluoromethane	75694	Ethylhexyl acrylate (2-isomer)	103117
Trichlorotrifluoroethane	76131	Formamide	75127
Trichlorophenol (2,4,5-isomer)	95954	Formic acid	64186
Triethanolamine	102716	Glycerol	56815
Triethylene glycol	112276	Glycerol dichlorohydrin	26545737
Triethylene glycol dimethyl ether (Glycol ether)	112492	Glycerol triether	25791962
Triethylene glycol monomethyl ether	112356	Glycine	56406
Trimethylpropane	77996	Glyoxal	107222
Vinyl chloride (Chloro ethylene)	75014	Hexachlorobenzene	118741
Xylenes (mixtures)	1330207	Hexachlorobutadiene	87683
Xylenes (o-isomer)	95476	Hexachloroethane	67721
Xylenes (p-isomer)	106423	Hexadiene (1,4-isomer)	592450
<b>Group II</b>			
Acetaldehyde	75070	Hexamethylenediamine	124094
Acetaldol	107891	Methyl formate	107313
Acetamide	60355	Methyl phenol carbinol	98851
Acetanilide	103844	m-Nitroaniline	99092
Acetic acid	64197	Nitropropane	79469
Acetic anhydride	108247	Paraldehyde	123637
Acetyl chloride	75365	Peracetic acid	79210
Aminoethylethanolamine	111411	Picoline (b-isomer)	108996
Anisidine (o-isomer)	90040	Piperidine	110894
Butadiene (1,3-isomer)	106990	Pyridine	110861
Butyl acetate (n-isomer)	123864	Sebacic acid	111206
Butyl alcohol (n-isomer)	71363	Sodium acetate	127093
Butylamine (n-isomer)	109739	Sodium chloroacetate	3926623
Butylene glycol (1,3-isomer)	107880	Sorbic acid	110441
Butyraldehyde (n-isomer)	123728	Sulfolane	126330
Butyric acid	107926	Terephthalic acid	100210
Butyric anhydride	106310	Tetrachloroethane (1,1,2,2-isomer)	79345
Caprolactam	105602	Tetrahydrophthalic anhydride	85438
Carbon tetrabromide	558134	Tetramethylenediamine	110601
Carbon tetrafluoride	75730	Toluene 2,4 diamine	95807
Chloral	75876	Toluene 2,4 diisocyanate	584849
Chloroacetic acid	79118	Toluene diisocyanates (mixture)	26471625
Chloroaniline (m-isomer)	108429	Toluidine (o-isomer)	95534
Chloroaniline (p-isomer)	106478	Trichloroethane (1,1,1-isomer) (vinyl trichloride)	71556
Chlorophenol (m-isomer)	108430	Vinyl acetate	108054
Chlorophenol (p-isomer)	106489	Vinylcyclohexene (4-isomer)	100403
Chloroprene (2-Chloro-1,3-Butadiene)	126998	Vinylidene chloride (1,1-Dichloroethylene)	75354

## Appendix B. Hazardous Organic Chemical Production Processes (continued)

Chemical Name	CAS Number	Chemical Name	CAS Number		
<b>Group III</b>					
Acetoacetanilide	102012	Nitroanisole (o-isomer)	91236		
Adipic acid	124049	Nitroanisole (p-isomer)	100174		
Aminobenzoic acid	132115	Nitrobenzoic acid

Diphenyl thiourea (POM)	102089	Decahydronaphthalate	91178		
Diphenylamine (POM)	122394	Diallyl Phthalate	131179		
Dodecylphenol	27193868	Diethylamine	109897		
Ethylaniline (N-isomer)	103695	Dimethyl ether-N,N	115106		
Ethylaniline (o-isomer)	578541	Dimethyl sulfide	75183		
Hydroxybenzoic acid (p-isomer)	99967	Dimethyl sulfoxide	67685		
Isophthalic acid	121915	Dimethylamine	124403		
Isopropylphenol	25168063	Ethyl chloride (Chloroethane)	75003		
m-Chlorophenol	108430	Glutaraldehyde	111308		
Methylaniline (n-isomer)	100618	Hexanetriol (1,2,6-isomer)	10694		
Methylcyclohexane	108872	Isophorone	78591		
Methylene cyclohexanone	1331222	Isopropyl acetate	108214		
Methylene diphenyl diisocyanate (MDI)	101688	Methanol	67561		
m-Xylene	108383	Methyl acetate	79209		
Nitroaniline (m-isomer)	99092	Methyl acetoacetate	105453		

## Appendix B. Hazardous Organic Chemical Production Processes (continued)

Chemical Name	CAS Number	Chemical Name	CAS Number
Methyl bromide (Bromomethane)	74839	Diacetone alcohol	123422
Methyl chloride (Chloromethane)	74873	Diaminophenol hydrochloride	137097
Methyl hydrazine	60344	Dibromoethane	74953
Methyl isobutyl carbinol	108112	Dichlorohydrin	96231
Methyl isobutyl ketone (Hexone)	108101	Dicyanadimide	461585
Methyl isocyanate	624839	Diethylaniline (2,6-isomer)	579668
Methyl mercaptan	74931	Difluoroethane	75376
Methyl methacrylate	80626	Diisobutylene	25167708
Methylamine	74895	Diisooctyl phthalate	27554263
Naphthalene	91203	Diketene	674828
Naphthalene sulfonic acid (a-isomer) (POM)	85472	Dodecylaniline	26675174
Naphthalene sulfonic acid (b-isomer) (POM)	120183	Ethyl orthoformate	122510
Naphthol (a-isomer) (POM)	90153	Ethyl oxalate	95921
Naphthol (b-isomer) (POM)	135193	Ethylamine	75047
Nitronaphthalene (1-isomer)	86577	Ethylcellulose	9004573
Perchloromethyl mercaptan	594423	Ethylcyanoacetate	105566
Phosgene	75445	Hexachlorocyclopentadiene	77474
Propionaldehyde	123386	Hexamethylene glycol	629118
Propyl alcohol (n-isomer)	71238	Hydrogen cyanide (CN compound)	74908
Propyl chloride	540545	Isobutyl acrylate	106638
Propylamine	107108	Isobutylene	115117
Propylene dichloride (1,2-Dichloropropane)	78875	Ketone	463514
Sodium methoxide	124414	Linear alkyl sulfonate (no CAS# assigned)	—
Tetraethyl lead	78002	Mesityl oxide	141797
Tetrahydronaphthalene (Tetralin) (POM)	119642	Methacrylic acid	79414
Triethylamine	121448	Methallyl chloride	563473
Trimethylamine	75503	Methyl acrylate	96333
Trimethylcyclohexanol	933482	Methyl ethyl ketone (2-Butanone)	78933
Trimethylcyclohexanone	2408379	Methyl tert butyl ether	1634044
<b>Group V</b>			
Acetal	105577	Methylpentynol	77758
Acetone cyanohydrin (CN compound)	75865	n-Dodecylbenzene	121013
Alkyl naphthalenes (no CAS# assigned) (POM)	—	Neopentanoic acid	75989
Bromoform	75252	Nonylphenol	25154523
Butyl acrylate (n-isomer)	141322	N-vinyl-2-pyrrolidine	88120
Butyl alcohol (s-isomer)	78922	Polyethylene glycol	25322683
Butyl alcohol (t-isomer)	75650	Polypropylene glycol	25322694
Butyl benzoic acid (p-tert-isomer)	96737	Resorcylic acid	27138674
Butylamine (s-isomer)	13952846	Sodium carboxymethyl cellulose	9004324
Butylamine (t-isomer)	75649	Sodium cyanide	143339
Carbaryl	63252	Sodium formate	141537
Cellulose acetate	9004357	tert-Butylbenzene	98066
Chlorodifluoroethane	75456	Tetramethyl lead	75741
Chlorophenols	25167800	Tetramethylmethylenediamine	110189
Chlorosulfonic acid	7790945	Triisobutylene	7756947
Cyanamide	420042	Trimethylpentane (2,2,4-isomer)	540841
Cyanogen chloride (CN compound)	506774	Urea	57136
Cyanuric acid	108805	Xylenol	1300716
Cyanuric chloride	108770	Xylenol (2,3-isomer)	526750
		Xylenol (2,4-isomer)	105679
		Xylenol (2,5-isomer)	95874
		Xylenol (2,6-isomer)	576261
		Xylenol (3,4-isomer)	95658
		Xylenol (3,5-isomer)	108689

The information set forth herein is furnished free of charge and is based on technical data that DuPont believes to be reliable and falls within the normal range of properties. It is intended for use by persons having technical skill, at their own discretion and risk. This data should not be used to establish specification limits nor used alone as the basis of design. Handling precaution information is given with the understanding that those using it will satisfy themselves that their particular conditions of use present no health or safety hazards. Since conditions of product use and disposal are outside our control, we make no warranties, express or implied, and assume no liability in connection with any use of this information. As with any product, evaluation under end-use conditions prior to specification is essential. Nothing herein is to be taken as a license to operate or a recommendation to infringe on patents.

**Caution:** Do not use in medical applications involving permanent implantation in the human body. For other medical applications, discuss with your DuPont customer service representative and read Medical Caution Statement H-50103-3.
